1. VSCU Service

1.1. Introduction

Virtual Sales Control Unit known as VSCU is a communication module for private TIS/ERP applications to send/receive various data (sales, purchase transaction data, receipts, etc.) to and from the KRA eTIMS server in other word it is like a bridge system Between KRA eTIMS systems and private TIS/ERP.

1.2. Environment

VSCU has two types; Production and Test.

Type	Description	Remark
Production VSCU	Server TIS application utilizes a Production VSCU to send and receive data to and from the KRA eTIMS API production server.	
Test VSCU	During development, the test application can send and receive test data to and from the KRA eTIMS API test server using a Test VSCU.	

The following is a Test VSCU technical information.

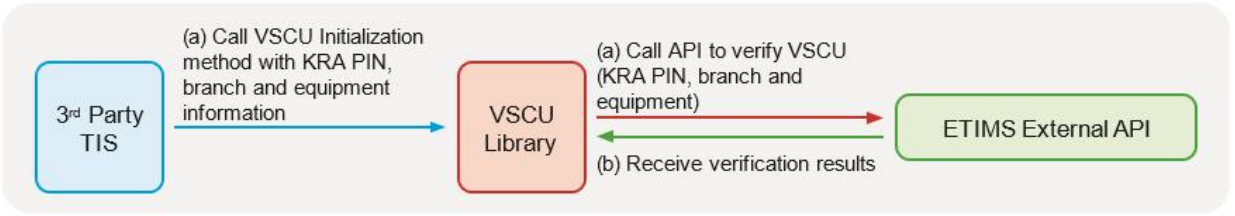
Title	Contents	Remark
Supported Software Language	All / Web services	
Distributed Package	JAR	
API architectural style of web service	REST	
Supported web server	Tomcat, Jetty, Apache HHTP	
Interface data format	JSON	
O/S	Windows 10+, Linux, Unix	
eTIMS VSCU API Server Address (Production)	http://<hostname or ip running vscu jar>:<*server.port*>	
eTIMS API Server Address (Test)	http://<hostname or ip running vscu jar>:<*server.port*>	

2. Technical Outline

2.1. The Application Process to Use VSCU

To use VSCU, a taxpayer must apply for VSCU service and get approval from KRA.

After the approval of VSCU, a JAR file is deployed in your local webserver through its web services a taxpayer can call Initialization service to start activation. When a taxpayer calls the initialization Service URL of VSCU with PIN, branch office, and equipment information as request body, VSCU will begin verification of the device and receive and save keys from the KRA eTIMS API server.

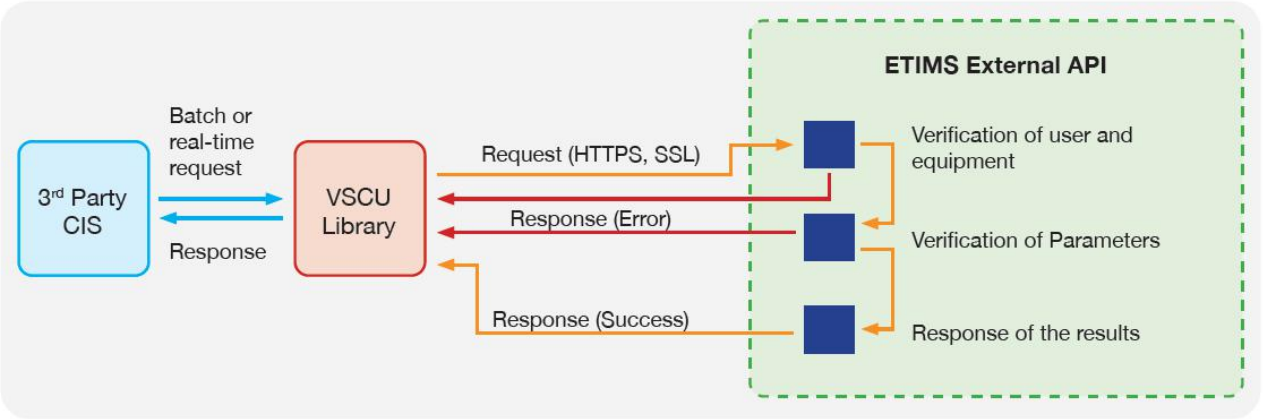


2.2. VSCU Running Process and Main Configurations

There are several technical policies that VSCU users have to follow.

1. To use VSCU a JAR file is deployed on your local webserver and need to be up and running locally.
2. Sending/Receiving data to and from eTIMS Server will be done by calling Methods of VSCU web services from a VSCU JAR deployed on your local webserver
3. To retrieve the latest data from eTIMS API server, VSCU shall send the 'Date and Time' on which the kind of data was finally received from the eTIMS API server. So, the 'Date and Time' of final request should be managed by TIS, and once successfully retrieved, TIS shall update the latest 'Date and Time' to the related data for the next update.
4. If there is no internet connection for 24 hours after VSCU issues a receipt signature and an internal data, VSCU stops issuing a receipt number.

The below diagram shows a basic VSCU running process.



2.3. A Sample of VSCU Guide Document

Below is a sample Java code to show how developers can make a call to KRA eTIMS API server through VSCU web services deployed in local server

API Routes (URL Paths)

http://<hostname or ip running vscu jar>:8088/selectInitInfo

Request Body

```
{
"tin": "A123456789Z",
"bhfId": "00",
"dvcSrlNo":"dvc999993204"
}
```

3. VSCU business process

3.1. VSCU functions

The services provided in this VSCU are grouped by its purpose into eight (8) categories. The below briefly introduces the purpose of each category.

1. Data initialization (Send only)
    a. For a device authentication (VSCU), registration and approval of equipment must be completed.
2. Code data (Get only)
    a. Methods of this category are used to receive necessary standard codes and data from the eTIMS API Server, which is the basis of generating invoice data. To send Invoice data to the eTIMS API server, the consistency of the data is essential.
    b. The standard codes and data are including; item classification code for managing item, location code, and package, weight code, PIN list and notice from KRA. For more information, check code definition chapter.
3. Branch information (Send only)
    a. Methods of this category are to send customer list of head and branch offices and user accounts of branch offices.
    b. This category has a method which requests branch codes to be used later while sending stock from main branch to branch offices.
4. Item information (Send only)
    a. Methods of this category are to send registered item and item composition information in a TIS application.
    b. In case you want to recover your items, you can receive them through eTIMS API server.
5. Imported item (Get and Send)
    a. Methods of this category are to receive data of imported items which is declared by the PIN of TIS application owner and to send confirmation of the received imported items.
    b. The imported items data are retrieved from KRA customs system and data can be used for stock adjustment.
6. Sales management (Send only)
    a. Methods of this category are to send data of sales transaction and sales Invoice to eTIMS server.
    b. Sales transaction data is composed of sales contract such as Customer PIN, Customer Name, Sales Type Code, Receipt Type Code, Payment Type Code, Invoice Status Code, Validated Date, Sale Date, Stock Released Date, Cancel Requested Date, Canceled Date Credit Note Date and etc.
    c. Sales Invoice data is composed of Invoice information such as Invoice Number, Current Receipt Number, Total Receipt Number, Customer PIN, Customer Mobile Number, Receipt Published Date, Internal Data, Receipt Signature and etc.

7. Purchase information (Get and Send)

    a. Methods of this category are to request data of purchase transaction of the PIN of TIS application owner to eTIMS server and send confirmation of the transaction.

    b. When a seller registers sales transaction and Invoice data to eTIMS server, buyer can request such data for purchase confirmation and stock adjustment purpose.

8. Stock information (Send only)

    a. Methods of this category are to send inventory in and out and stock status by item of TIS application to eTIMS server.

The table below outlines the tasks required to send and receive data to and from the eTIMS API server.

Category	Action of TIS side	Description	Remark
Initialization	Device authentication (VSCU)	Device authentication (VSCU) from KRA. 3rd party users must complete an eTIMS Device Registration upon sign up on the eTIMS Taxpayer Portal. Registration and approval of VSCU is completed by KRA after submission of software.	Apply only one time. Refer to '2.1. Appling Process to use VSCU'
Basic data management	Get code list	TIS application can update common standard codes managed by KRA from eTIMS API server	
	Get item classification list	Server TIS application can update item classification codes managed by KRA from eTIMS API server.	
	Get all PIN list	TIS application can get latest PIN list from eTIMS server	
	Get the branch list of head office(store)	TIS application can update the branch office information of head office into eTIMS API server.	
	Get notice list from eTIMS API server	TIS application gets eTIMS notification managed by KRA from eTIMS API server.	
Branch information management	Send customer information	TIS application sends customer information of the head & branch offices into eTIMS server.	
	Send branch user account	TIS application sends branch user account information to upload it in eTIMS server.	
	Send branch insurance information	TIS application sends insurance information of the head & branch offices and update it in eTIMS server	Applied to Pharmacy only
Item management	Send Item information	TIS application sends item information (name, unit price, barcode and etc.) of the head or branch offices and updates them in eTIMS server	Head office(store) role
	Send Item Composition information	TIS application sends item composition information of the head or branch store and updates them in eTIMS API server. Item composition is used to calculate BOM (Bill of Material) of the final processed items.	Head office(store) role
	Get item list	TIS application gets item information updated to eTIMS server by TIS application.	
Imported item management	Get imported item information	TIS application gets imported item information managed by KRA customs	Head office(store) role

Category	Action of TIS side	Description	Remark
		department. All the import declaration result of an owner of TIS application is provided from eTIMS server.	
	Send (converted) imported item information	TIS shall convert the received imported item information into eTIMS standard item information for sales (inventory). TIS application sends converted imported items information to eTIMS API server.	Head office(store) role
Sales management	Send sales transaction information	TIS application sends sales transaction information to eTIMS API server. The sales transaction information must proceed sales Invoice information.	
	Send sales Invoice information and get Internal Data and Signature Data	TIS application sends sales invoice information to the VSCU and gets Receipt counters, Receipt Date, Internal Data and Signature Data.	
		Every sales Invoice information must have its sales transaction information sent in advance to eTIMS server.	
Purchase transaction management	Get purchase transaction information	TIS application gets purchase transaction information which were registered to eTIMS server by a seller under TIS application owner's PIN.	Head office(store) role
	Send purchase transaction confirmation	TIS application sends purchase transaction confirmation of received purchase transaction information to eTIMS server.	Head office(store) role
Stock management	Send stock in/out information	When adjusting inventory quantities or selling items at each branches or head office, TIS application sends the stock in/out information to the eTIMS server. Every stock in/out information must have its sales Invoice information sent in advance to eTIMS server.	
	Send stock inventory information	If stock inventory information is changed due to stock IN / OUT, Server TIS application sends the changed information of the inventory master and stores it in the eTIMS API server. Every stock inventory information must have its stock in/out information sent in advance to eTIMS server.	

3.2. Details of VSCU functions

3.2.1. List of VSCU functions

Section	Paths/URL	Description	Preconditional method	Argument Object	Return Object
Initialization	**/initializer/selectInitInfo**	Lookup initial setup information of VSCU Device		**InitInfoReq**	**InitInfoRes**
	You can lookup the initial configuration information registered in the server. This function provides authenticated information of VSCU device. For more information, refer to '3.3.1.1 InitReq/Res'				
Basic data management	**/code/selectCodes**	Lookup list of code		**CodeReq**	**CodeRes**
	You can lookup common code list registered in server with this function. This API function provides code classification and code detail at once. For more information, refer to '3.3.2.1 CodeReq/Res'				
	/itemClass/selectItemsClass	Lookup list of item classification		**ItemClsReq**	**ItemClsRes**
	You can lookup list of item classification registered in server with this function. This API function provides item category and item list at once. For more information, refer to '3.3.2.2. ItemClsReq/Res'				
	/customers/selectCustomer	Retrieve information for a specified PIN(customer)		**CustReq**	**CustRes**
	This API function synchronizes the taxpayer information registered on the server with client. For more information, refer to '3.3.2.3. CustReq/Res'				
	/branches/selectBranches	Lookup list of taxpayer branch information		**BhfReq**	**BhfRes**
	You can lookup list of taxpayer branch information registered in server. This API function provides every information of taxpayer branch. For more information, refer to '3.2.2.4. BhfReq/Res'				

Tulipe Ushuru, Tujitegemee!

Section	Paths/URL	Description	Preconditional method	Argument Object	Return Object
	/notices/selectNotices	Lookup the list of notice		NoticeReq	NoticeRes
	You can lookup the list of notice in taxpayer client. This API function provides list of notice registered in the server. For more information, refer to '3.2.2.5. NoticeReq/Res'				
Branch information management	/branches/saveBrancheCustomers	Save customer of branch		BhfCustSaveReq	BhfCustSaveRes
	You can store branch infomation in server for recover the client data. This API function stores the client customer information managed by the store on the server. For more information, refer to '3.3.3.1. BhfCustSaveReq/Res'				
	/branches/saveBrancheUsers	Save branch user account		BhfUserSaveReq	BhfUserSaveRes
	You can store branch user account in server. This API function stores the user account information of taxpayer branch in server. For more information, refer to '3.3.3.2. BhfUserSaveReq/Res'.				
	/branches /saveBrancheInsurances	Save Insurance company information of branch		BhfInsuranceSaveReq	BhfInsuranceSaveRes
	You can save insurance company information which taxpayer branch uses in server. This API function performs storing the insurance company information managed by taxpayer pharmacy. For more information, refer to '3.3.3.3 BhfInsuranceSaveReq/Res'				
Product item management	/items/selectItems	Lookup list of item(product)		ItemReq	ItemRes
	You can lookup the list of Item information in server. This API function provides list of product information for taxpayer registered in server. For more information, refer to '3.3.4.3 ItemReq/Res'				
	/items/saveItems	Save Item		ItemSaveReq	ItemSaveRes
	You can save the product information in server. This API function performs storing item information managed by the taxpayer client in the server. For more information, refer to '3.3.4.1 ItemSaveReq/Res'				

Section	Paths/URL	Description	Preconditional method	Argument Object	Return Object
	/items /saveItemComposition	Save Item Composition	saveItem	**ItemCpstSaveReq**	**ItemCpstSaveRes**
	You can store item composition in server. This API function performs storing taxpayer's item composition information in server. But this information is used during restoration of client. It is not able to be looked up in server. For more information, refer to '3.3.4.2 ItemCpstSaveReq/Res'				
	/imports/selectImportItems	Lookup list of imported item		**ImptItemReq**	**ImptItemRes**
Imported item management	You can lookup list of taxpayer's imported item in server. This API function provides information of taxpayer's imported item in server. For more information, refer to '3.3.5.1 ImptItemReq/Res'				
	/imports/ updateImportItems	Revise imported item		**ImptItemSaveReq**	**ImptItemSaveRes**
	You can revise imported item information in server. The taxpayer adds the imported items to item and purchase date at the client. The imported item information is transferred to the server through this API function. For more information, refer to '3.3.5.2 ImptItemSaveReq/Res'				
Sales transaction management	/trnsSales/saveSales	Save sales transaction		**TrnsSalesSaveReq**	**TrnsSalesSaveRes**
	You can save sales transaction information in server. This API function transfers the transaction information of taxpayer client's sales to the server. For more information, refer to '3.3.6.1. TranSalesSaveReq/Res'				
Purchase transaction management	/trnsPurchase/selectTrnsPurchaseSales	Lookup purchases-sales transaction list		**TrnsPurchaseSalesReq**	**TrnsPurchaseSalesRes**
	You can look up sales infomation in order to regiser purchases on taxpayer's branch registered in server. This API function provides unregistered infomations on taxpayer's purchases list among sales list that taxpayer is assigned to transaction party. For more information, refer to '3.3.7.1. TrnsPurchaseSalesReq/Res'				

Section	Paths/URL	Description	Preconditional method	Argument Object	Return Object
	/trnsPurchase /savePurchases	Save Purchase information		**TrnsPurchaseSaveReq**	**TrnsPurchaseSaveRes**
	You can store purchases info in server. This API function sends the purchase transaction information generated from the taxpayer client and stores it. For more information, refer to '3.3.7.2. TrnsPurchaseSaveReq/Res'				
Stock management	/stockMaster/saveStockMaster	Save stock master information	insertStockIO	**StockMstSaveReq**	**StockMstSaveRes**
	You can store the stock master information in server. This API function saves the inventory master information managed by taxpayer client to the server. For more information, refer to '3.3.8.3. StockMstSaveReq/Res'				
	/stock/selectStockItems	Lookup the list of stock movement		**StockMoveReq**	**StockMoveRes**
	You can look up the stock movement list in server. This API function provides the result of the shifting stock quantity between the head office and the branches. in the server. For more information, refer to '3.3.8.1. StockMoveReq/Res'				
	/saveStockItems/saveStockItems	Save stock in/out		**StockIOSaveReq**	**StockIOSaveRes**
	You can store taxpayer stock in/out information in server. This API function performs storing stock in/out data registered by taxpayer client of head/branch in the server. For more information, refer to '3.3.8.2. StockIOSave'				

Below feature illustrate how a module can retrieve code list. This example is intended to help developers understand the contents of the next page "3.3. Specification".

3.3.2.3. Customers Request/Response

This part describes the Customer API function(Paths : /customers/selectCustomer) and data types for each Registered Customer Entity attribute. The Customer means the taxpayer of Kenya. API functions are divided into 'Request:Argument' and 'Response:Return Object'. The CustReq is an Argument Object of Request, The CustRes is a Return Object of Response. Based on the 'custmTin', the server provides customer information registered on the specified Customer PIN.

4.17. Item Code

itemCd is mandatory and it has to be unique. In other words, each item has its unique itemCd.

Below is how item code is generated. For example: itemCd: KE2NTBA0000012

KE: Country of Origin (Kenys)
2: Product Type (Finished Product)
NT: Packaging Unit (NET)
BA: Quantity Unity (Barrel)
0000012: increments from 0000001 to N value

4.18. Import Item Status

Code Classification			Code Classification Name	
26			Import item Status	
Code	Sort Order	Code Name	Code Description	remark
1	1	Unsent		
2	2	Waiting		
3	3	Approved		
4	4	Cancelled
